EXCHANGING ELECTRONIC MESSAGES BETWEEN A HOST COMPUTER SYSTEM AND A DISTRIBUTED COMPUTER SYSTEM

Abstract of the Disclosure

10

15

5

Exchanging electronic messages between an online transaction processing host computer system and a distributed computer system. This communication exchange encompasses both guaranteed delivery of electronic messages and non-guaranteed delivery of native terminal screen and printer messages, utilizing a message queuing facility. A two-tier architecture is used for all message translations, blocking and reassembling, queuing, acknowledgments and retransmissions, generally reducing necessary message processing and reducing use of system resources. 2265413
